

## Now you have a choice! VXI Passport headsets are compatible with VXI, Plantronics® or GN Netcom® equipment

Whether you have VXI, Plantronics or GN Netcom equipment, there's a VXI Passport headset that will work with your equipment. Available with P-series (Plantronics-compatible), G-series (GN Netcom-compatible) and V-series (VXI-compatible) quick disconnects, VXI Passport headsets easily integrate with your installed equipment.

You'll love the sound clarity and comfort of VXI Passport headsets. The high performance, noise canceling microphone blocks out the sound of surrounding agents for a more professional sounding call. The slightly cupped ear cushion conforms to the ear for a more comfortable, stable fit and better sound isolation to hear your caller better. The virtually indestructible, highly flexible "gooseneck" microphone maintains its position for consistent voice input.

VXI Passport headsets are made with high impact resistant plastic to withstand the intense requirements of the professional contact center and include an industry-leading unconditional two-year warranty. So, even if an agent spills coffee on the headset, you won't have to pay to get it fixed.
